

Applicable Standards and Statutory Provisions (Compiled Reference)

Document ID: REG-REF-2026-01

Compiled: 2026-07-01 | Authority Level: 1 (Regulatory Requirement) for all entries below

Sources are public statutory instruments and industry standards administered by Indian regulatory bodies.

OISD-STD-105 -- Work Permit System

Issued by the Oil Industry Safety Directorate (OISD), Ministry of Petroleum and Natural Gas (Revision I, September 2004). Governs the permit-to-work system for hydrocarbon processing facilities, covering cold work, hot work, confined space entry, and electrical isolation/energization permits. Equipment must be isolated, drained, and depressurized before permit issuance, and gas testing for hydrocarbons, oxygen deficiency, and toxic gases is a mandatory pre-requisite before hot work or vessel entry permits are issued.

OISD-STD-134 -- Inspection of Heat Exchangers

Issued by OISD. Sets inspection frequency and methodology requirements specific to shell and tube heat exchangers in hydrocarbon service, including tubesheet and shell-side condition assessment.

OISD-STD-128 -- Inspection of Unfired Pressure Vessels

Issued by OISD. Governs inspection frequency, corrosion-rate monitoring, and documentation requirements for pressure-retaining equipment, correlating measured deterioration against design life to determine repair or replacement timing.

Static and Mobile Pressure Vessels (Unfired) Rules, 2016

Statutory rules administered under the Petroleum and Explosives Safety Organisation (PESO). A number of OISD standards, including OISD-STD-128, are given statutory force under these Rules, making their inspection provisions legally mandatory rather than advisory guidance.

The Factories Act, 1948 -- Section 31 (Pressure Plant)

Requires that where any plant is operated at a pressure above atmospheric pressure, effective measures are taken to ensure that the safe working pressure is not exceeded.

The Factories Act, 1948 -- Section 87 (Dangerous Operations)

Empowers state governments to declare specific manufacturing processes or operations as dangerous, triggering additional worker protection, examination, and protective equipment requirements for personnel involved in those operations.

The Factories Act, 1948 -- Section 36 (Precautions Against Dangerous Fumes, Gases etc.)

Prohibits entry into any confined space where hazardous gas, fume, vapour, or dust concentration exists to a degree involving risk to persons, unless adequate precautionary measures are first taken -- directly

relevant to confined-space and vessel-entry permit conditions.

Verification Note

These entries are compiled for demonstration purposes from public OISD and India Code sources. Verify current revision status against oisd.gov.in and indiacode.nic.in before use in any live regulatory submission.
